DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 1) Claims 1-28, are rejected under 35 U.S.C. 103(a) as being unpatentable over Paraskevas (4,480,796) in view of Zugelder (3,608,976).

Claims 1, 3-5, 9-14, 17, 23, 25-28; Paraskevas discloses a pulping apparatus for defibering papermaking stock (Paraskevas, col. 1, lines 5-10) and located in a tank of a paper stock processing machine (col. 2, lines 13-59). The apparatus consists of a rotor equipped with blades, said blades having a leading front surface (col. 2, lines 23-59). The rotor assembly is mounted for rotation by means of a shaft 14 from a driving source and is arranged to cooperate with an extractor plate 16 having an annular band of apertures 16a formed as shown in Figure 1. The angle and shape of the blades is shown in Figures 3-5 of Paraskevas. The claim additionally recites the limitation of a wear resistant surface coupled with the leading front surface of the blade. Zugelder discloses wear resistant ribs extending across the width of the blades in a rotor assembly (Zugelder, col. 1, lines 1-28). It would have been obvious to combine the teachings of Paraskevas with the teachings of Zugelder because the wear-resistant

surfaces of Zugelder would provide wear protection of the rotor blades in the design of Paraskevas.

Claims 2, 6-8, 15-16, 18-22, 24; the anti-wear element of Zugelder is a metal with a wear-resistant material attached by brazing. It would have been obvious that the anti-wear element is attached to the leading surface by welding.

Conclusion

2) Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Halpern whose telephone number is 703-305-4522. The examiner can normally be reached on Mon-Fri, (8:30-6:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stanley Silverman can be reached on 703-308-3837. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-7718 for regular communications and 703-305-3599 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone no. is 703-308-0651.
